

Call 2020-BR

COVER SHEET

Enclosure 2: Specification of Costs

SNSA rules for this enclosure

Required contents

- A detailed specification of anticipated project costs for all years for which funding is sought (NB the projects may not start before September 2020). Give the rationale for each item. Note that it is not sufficient to merely restate the information given on the budget forms F1-F4.
- Please note that the costs of balloon or rocket launch services and related industrial support (e.g. integration of the experiment) should not be included at this stage.
- If your proposed project requires funding for more than four years then estimate costs in this enclosure also for the additional years, despite the fact that the forms aren't prepared for more than four yearly budgets. Clearly specify which costs are proposed for SNSA funding and which costs are covered by other sources.
- If your university/institute has a standard, mandatory tabulation for computation of indirect costs ("full kostnadstäckning"), then include it in this enclosure. However, those tables don't free the applicants from the responsibility of specifying indirect costs in Forms F1-F4 in a correct way. Please note that those forms should contain sought indirect costs only, not total indirect costs.

Exclude VAT in the sought amounts.
