

Call 2019-C

COVER SHEET

Enclosure 2: Cost Specification and Letters of Support

SNSA rules for this enclosure

Required contents

- A specification of anticipated direct project costs for all years in addition to the salary costs (maximum 100 kkr/year). Give the rationale for each item. Note that it is not sufficient to merely restate the information given on the budget forms F1-F4.
- If your university/institute has a standard, mandatory tabulation for computation of indirect costs (“full kostnadstäckning”), then include it in this enclosure. However, those tables don’t free the applicants from the responsibility of specifying indirect costs in Forms F1-F4 in a correct way. Please note that those forms should contain sought indirect costs only, not total indirect costs.
- A letter of support from the head of department / institute at your administrating organisation in Sweden is mandatory. This may include specification of facilities and support to be provided to the project and the applicant, as well as a career outlook beyond the grant period.
- For applicants planning for more than three months of work outside Sweden, also include a letter of support from the host organisation abroad. This should include a rationale for wanting to welcome the applicant to the research establishment.

Other letters of support

Additional letters may only be enclosed if restricted to objective information of importance for an evaluation of the possibility to carry out the proposed research project. Thus, you may include letters on allocation of observing time, selection of experiments to be carried out in space, access to data from a space mission, schedule information on space projects, etc. Such letters must not contain subjective information about the applicant.
